PULASTHI AVINASH

UI/UX Design | DevOps | IT Undergraduate Sri Lanka
GitHub | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

Third-year BSc (Hons) Information Technology undergraduate at Horizon Campus, Sri Lanka, with a strong interest in UI/UX design and hands-on skills in Next.js, TypeScript, Node.js, CSS, and Python. Led a five-member team to design and deliver Tap-It, a fintech mobile wallet app, from concept and branding to Figma UI designs and a simple "Tap & Go" experience for bill payments, QR payments, mobile reloads, and money transfers. Seeking a UI/UX Design Internship where I can contribute to creative projects while building my professional UX skills.

EDUCATION

BSc (Hons) in Information Technology (Reading)
Horizon Campus, Sri Lanka Third Year
Expected Graduation: 2028
Relevant Areas of Study: Software Development, Web Technologies, Database Systems, Computer Networks, and Artificial Intelligence.

TECHNICAL SKILLS

- **Design:** UI/UX Design, Brand Identity, Material 3
- **Programming Languages:** Java, Python, JavaScript, HTML5, CSS3, Kotlin, TypeScript
- **Frameworks & Libraries:** Spring Boot, Node.js, Express.js, Vite, Streamlit, LangChain, Next.js
- **Backend & APIs:** REST APIs, Postman, Convex
- **AI & Data:** Agentic AI, Retrieval-Augmented Generation (RAG), Groq vision models, ChromaDB, OpenAI API
- **Databases:** MongoDB
- **DevOps & Tools:** Docker, Docker Compose, Git, GitHub, GitHub Actions, CI/CD, Nginx, ESLint, Prettier, Vercel, Jira
- **Operating Systems:** Linux (system administration, bash scripting)
- **Practices:** Git branching strategies, container security hardening, code quality automation, Agile teamwork

ACADEMIC PROJECTS

1. Tap-It: Fintech Mobile Wallet App (Demo) | Group Leader and UI/UX Designer
Figma, Kotlin, Jetpack Compose, Material 3

- Led a 5-member team to design and build a native Android wallet app prototype simulating bill payments, mobile reloads, money transfers, and QR payments, aligned with the UN SDG goal of expanding access to financial services.
- Defined the brand identity and UI in Figma, including a #0052FF blue palette, a blue-to-purple gradient, rounded components, and a persistent bottom navigation bar.
- Applied the design principles of consistency, instant feedback (success screens, receipts), and clear navigation, with confirmation dialogs for destructive actions like deleting a card or account.
- Built interactive UI details in Jetpack Compose, such as a custom PIN keypad with animated dot indicators and a live card preview that updates as users type.

2. ForensicSight – Agentic AI Image Forensics and Deepfake Detection System
Python, LangChain, Groq (Llama and Vision models), ChromaDB, RAG, Streamlit

- Built a multi-agent system (Router, Analyst, Reporter) using LangChain that analyses images for AI generation, manipulation, and deepfake artifacts, using Groq-hosted Llama and vision models.
- Designed prompts and a map-reduce tiling workflow that splits each image into 4 quadrants for separate vision-model inspection, then combines the findings into a final verdict through a reflection step
- Developed a RAG pipeline (ChromaDB, HuggingFace embeddings) over a forensic knowledge base, and a Streamlit interface deployed on Streamlit Community Cloud where users upload an image and view the analysis.

3. CryptoPOS System (CryptoPay Gateway Simulator) – Group Leader and DevOps Engineer
Node.js, Express.js, MongoDB, Docker, Docker Compose, Nginx, GitHub Actions, Vercel

- Led a 3-member team building a web-based crypto POS simulator that converts LKR bills into BTC, ETH, SOL, and USDT using live CoinGecko API rates, with full-payment and 3-month installment options, an admin dashboard, and printable receipts.
- Architected a three-tier stack (Nginx, Node.js/Express, MongoDB) using Docker Compose with dedicated bridge networking.
- Engineered a CI/CD pipeline with two GitHub Actions workflows: one runs ESLint and Prettier checks and Docker build validation on every push and pull request, and the other auto-deploys to Vercel from the main branch.
- Hardened containers using non-root users, read-only filesystems with tmpfs, and environment-based secrets management; used multi-stage Alpine-based builds to reduce image size.
- Established a main/develop/feature branching strategy with branch protection rules and resolved merge conflicts across team branches.

4. SecureReport System
Next.js, TypeScript, Tailwind CSS, Convex, OpenAI API, OpenPGP.js

- Led a 4-member team to design and deliver an anonymous, bilingual (English and Sinhala) civic reporting platform.
- Integrated AI-based redaction of reporter and witness personal details (English, Sinhala, Singlish), with browser-side OpenPGP encryption and camera-only evidence capture with EXIF stripping.
- Designed privacy-first user flows: no-account reporting, a downloadable PDF receipt, anonymous case-key status tracking, and a public oversight dashboard.

GitHub: github.com/pulasthiav/secure-report-system

ACHIEVEMENTS

Team Leader – Artifact Architects
Cursor Buildathon 2026 | May 2026 | 4th Place, Convex Track (111 teams)
for building SecureReport, an anonymous civic reporting platform in 24 hours.

WORK EXPERIENCE

Trainee Assistant | Regional Development Bank, Talawa Branch | 2021 to 2022

LEADERSHIP & ACTIVITIES

Football Captain, Horizon Campus Football Team (2024 - Present)
Director Board Sports Council Horizon Campus (2025 - 2026)
Football Player, Piliyandala Football Club (2023 - Present)

- Play competitively for a local club and the university team, balancing training and matches with academic and leadership commitments.
- Built teamwork, discipline and communication skills over 5+ years of regular competitive football.
